

Intelligent supervisory control and data analytics

Revolutionising SCADA with advanced analytics

From whole portfolio management to individual turbine insight, Proserv brings together data analytics with our industry expertise into one easy solution.

Your solution

Bridge the divide between control and data analytics

- Turbine and data agnostic
- Multi SCADA integration
- Advanced visualisation
- Custom sequencing
- Unlimited scalability
- Suited to generation, transmission and distribution

Customisable unified interface

Applications

Weather forecasting | power forecasting | vibration analysis | wind turbulence analysis | alarm analysis

Key benefits

Visualise, understand and act on your asset data

- Receive intuitive insights to guide your decision making
- Protect against obsolescence with a fully flexible and compliant system
- Safeguard your assets with leading cyber security and data sovereignty
- Optimise your assets and reduce system maintenance and downtime
- Save OPEX costs with fewer interfaces
- Dedicated system support from Proserv for the life of your wind farm
